PROFESSIONAL SUMMARY

Computer Science (AI) undergraduate with strong foundations in Data Structures & Algorithms, OOP, DBMS, Operating Systems, and Computer Networks. Skilled in Python and JavaScript, with hands-on experience building computer vision systems using YOLOv8 and DeepSORT. Has built full-stack and AI-integrated projects exploring real-time communication and LLM-based querying. Strong problem-solving foundation with 150+ DSA problems solved on CodeChef, and a growing interest in AI-driven product development.

TECHNICAL SKILLS

Programming: C, C++, Python, JavaScript

Web Technologies: HTML5, CSS3, REST APIs

Databases: SQL, MySQL

AI/ML: YOLOv8, DeepSORT

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Tools: Git, GitHub, VS Code

PROJECTS

Praharī — The Watchman | YOLOv8, DeepSORT, Flask, SQLite, Groq API, Apple MPS

- Built an edge-optimized, real-time spatial-intelligence surveillance system using a hybrid edge-cloud architecture designed for 8GB RAM hardware (YOLOv8n detection on Apple MPS GPU, DeepSORT/native tracking on CPU, SQLite logging, LLM offloaded to a cloud API).
- Implemented persistent multi-object tracking with unique IDs maintained across frames using Ultralytics native tracking (persist=True).
- Designed anomaly detection logic for loitering (temporal analysis) and unattended-object detection (spatial/Euclidean distance thresholds).
- Integrated a Flask + Groq API (gemma2-9b-it) LLM bridge to enable natural-language querying over surveillance logs.
- Engineered a duplicate-write guard (logged-ID set) to keep the SQLite event log clean under continuous tracking.

Recall — AI-Powered Meeting Intelligence Platform | WebRTC, Socket.io, Node.js, Express, Firebase, Web Speech API

- Built a real-time video conferencing platform with peer-to-peer WebRTC calling, using Socket.io purely for signaling (SDP offer/answer, ICE candidate exchange).
- Integrated live speech-to-text transcription via the Web Speech API and automatic meeting summarization.
- Implemented Firebase Authentication and a meeting-history dashboard for past sessions.
- Designed the signaling server and REST APIs for user and meeting management with Node.js and Express.

Smart People Counter | Python, YOLOv8, DeepSORT

- Developed a computer vision application for real-time object detection and tracking to count people in a video feed.
- Logged detection and tracking data to CSV files for downstream analysis and reporting.

EXPERIENCE

UI/UX Design Intern — IndiBus Pvt. Ltd.

May 2024 – Sept 2024

- Collaborated with developers to translate UI designs into functional web interfaces.
- Conducted user research and usability testing to improve application workflows.
- Designed responsive wireframes and prototypes for web and mobile platforms.
- Worked closely with cross-functional teams throughout the product development lifecycle.

EDUCATION

ABES Institute of Technology

B.Tech in Computer Science (Artificial Intelligence) — CGPA: 7.7/10

Relevant Coursework: Data Structures, Algorithms, DBMS, Operating Systems, Computer Networks, Object-Oriented Programming

Sai Millennium Sr. Sec. School

Class XII (CBSE) — 83% | Class X (CBSE) — 94%

ACHIEVEMENTS

- Solved 150+ Data Structures & Algorithms problems on CodeChef.
- Built AI, computer vision, and full-stack projects spanning edge-optimized surveillance, real-time communication, and RAG-based systems.
- Strong interest in Software Engineering, Systems Design, and Intelligent Systems.
